

FOREHEAD/BROW LIFT

Looking in the mirror and seeing a face that appears tired, aged and even angry can be extremely discouraging. As can projecting a negative impression to the outside world when one doesn't feel that way on the inside.

Eyebrows often begin to descend as a person ages, causing them to appear much older than they feel. A forehead lift (also known as a brow lift) can help alleviate these problems. A forehead lift not only lifts the brow line and opens up the eyes, but helps create a smoother, more refined look. Additionally, this procedure can help to lessen the appearance of crow's feet in the temple area next to the eye.

A facelift or eyelid surgery combined with a forehead lift can make a marked difference in creating a more inviting and youthful appearance to the face.

Dr. Dayan uses modern, minimally invasive techniques to perform forehead lifts, reducing recovery time. This simple procedure will allow you to look refreshed, relaxed and rejuvenated.

FOREHEAD/BROW LIFT

“My wife feels better and has more confidence. She is more relaxed and she loves the compliments, like ‘You look great! What’s your secret?’”

– Carol’s husband
