

CLOSED RHINOPLASTY

THE "NO HAMMER, RARE BRUISING" TECHNIQUE

Over the past decade, Dr. Dayan has been teaching and performing rhinoplasty techniques that require less manipulation and less downtime. Much like a sculptor, Dr. Dayan uses a specially designed instrument to precisely and gently smooth the nasal structure to a softer finish with great accuracy.

Additionally, Dr. Dayan is one of few surgeons in the country considered an expert in what is known as the "closed-approach" to rhinoplasty. The closed method can be advantageous, as it is usually associated with shorter time under anesthesia, produces less swelling with little to no bruising and has a quicker recovery period. During your consultation, Dr. Dayan will be able to discuss which options will be best for you. It is especially important to select a surgeon experienced in treating both the interior and the exterior of the nose.
